

Pacific Syndromic Surveillance System

Reported number of cases of diarrhoea, influenza-like illness, and prolonged fever; by country or area, by week

* Starting week 2, Kiribati switched from 14 reporting sites to one. For consistency, the average number of cases per reporting site is shown.

Numbers of reported cases are not comparable between countries because of differences in the number of reporting sites and the size of the population covered. The purpose of the charts is to show trends over time.
